

## Dental Core Training – Hands on Restorative Dentistry

Thursday 18 December 2025

9.30am – 4.30pm

Clinical Techniques Laboratory and Seminar Room 1, School of Dentistry

### Aim

To provide dental trainees with a foundational understanding of implant dentistry by guiding them through the stages of treatment planning, introducing current surgical and restorative techniques, and exploring the role of digital technologies in implant dentistry.

### Objectives

- To understand the treatment planning stages in implant dentistry
- To be updated in the surgical and restorative aspects of implant placement
- To review digital techniques in implant dentistry

### Learning Content

This hands-on day will consist of a combination of presentations, interactive sessions, and networking opportunities. By the end of the course, trainees will have gained a foundational understanding of implant treatment planning, restorative procedures, and the role of digital tools in contemporary dental practice

**Facilitator: Simon Killough, Consultant in Restorative Dentistry, School of Dentistry**

**Total: 6 hours CPD**

**GDC Development Outcomes A, B & C**
